INVICTUS

The INVICTUS turntable combines functionality, superb engineering with outstanding never been done before innovations. The new INVICTUS turntable plays your records at the highest level and sets new a standard of performance. Even the finest musical details are perfectly reproduced. Nothing is coloured, added, changed or lost. Be part of your record and hear only what was intended by the musicians.

Ingenius inventions like the Sandwich Silencer platter enable the INVICTUS to reach a level of quality in reproduction of music that was never available before. The Sandwich construction of the platter in combination with the Silencers reduces possible resonances close to Zero. Combined with the new 6 Motor drive system the

platter is driven with record braking speed stability. Each of the 6 motors is controlled by his own DSP motor electronic.

The plinth of the INVICTUS is not only machined out of a solid block - we milled out a internal structure which is designed by Finite Element analysis. This leads to a plinth with much more structural stability on one side and reduces the weight on the other side.

The INVICTUS is a large turntable that can handle up to 4 tonearms. To handle the enormous weight of 150kg we suggest to use the offered stand for the INVICTUS. Which supports the look and the Design of the turntable. All 4 tubes have a internal Ambiente light system which can be dimmed. The shelves of the stand are made of sandwich glass which is extreme rigid and free of resonances.

Model:	INVICTUS
Construction details:	Aluminium, brass Sandwich
Speed change:	33 and 45rpm, 78 as option
Motor drive:	6 motor drive DSP controller
Bearing:	TIDORFOLON Bearing
Platter:	Sandwich Silencer platter 345mm
Total weight:	210 kg with stand
Dimensions (W/D/H in mm):	approx. 800 x 730 x 1210 with stand approx. 800 x 730 x 350 turntable only
Manufacturers guarantee:	10 years
